

WHEEL RIM COVER ENGAGEMENT DEVICE

ABSTRACT

5

A wheel rim cover engagement device includes an engage ring and a steel ring. The engage ring is fixed in the recess of the flange of a wheel rim, and a wheel rim cover has its inner fastening members tightly clasp the engage ring and is fixedly assembled on the wheel rim, 10 able to solve the problem that a wheel rim cover cannot directly be installed on the wheel rim of a large-size car because the radian of the flange of the wheel rim is too large and the inner circumferential edge of the wheel rim is too straight.
